Abstract. This paper explores the effectiveness of case studies as a pedagogical tool in teaching Legal English within the framework of English for Specific Purposes (ESP). Legal English, as a distinct branch of ESP, requires not only linguistic proficiency but also an understanding of legal reasoning, terminology, and discourse conventions. Case studies provide an authentic and context-driven method for developing these competencies. This article reviews relevant literature on case-based learning, discusses the methodological principles behind its implementation, and analyzes its advantages and challenges in teaching Legal English to non-native learners. Findings suggest that the case study method promotes critical thinking, contextual vocabulary acquisition, and communicative competence, making it a valuable instructional approach in ESP (Law) classrooms.

Introduction. The growing globalization of legal practice has increased the demand for professionals proficient in Legal English. As a specialized domain of ESP, Legal English focuses on equipping learners with the linguistic and communicative skills necessary for understanding and participating in legal discourse. Traditional teaching approaches—emphasizing memorization of terminology and translation—often fail to capture the complexity of legal reasoning and professional communication. In contrast, the case study method introduces learners to authentic legal contexts, encouraging them to analyze, discuss, and apply legal principles through language.

The aim of this paper is to examine how the case study method can be effectively utilized to teach Legal English. It discusses how real or adapted legal cases enhance students' comprehension, promote interaction, and facilitate the practical use of legal vocabulary and concepts.

Literature Review. Case-based learning (CBL) has been widely recognized as an effective strategy in professional education, particularly in law, business, and medicine. According to Herreid (2007), case studies foster active learning by situating students in realistic problem-solving scenarios that require both content knowledge and analytical thinking. In language education, CBL aligns with communicative and

task-based approaches that prioritize authentic use of language over rote learning (Ellis, 2003).

In ESP contexts, Hutchinson and Waters (1987) emphasize that language learning should be context-specific and purpose-driven. For Legal English, this means integrating legal discourse, reasoning, and terminology within meaningful contexts. Studies such as Northcott and Brown (2006) highlight that law students benefit most from materials that reflect genuine legal practice—such as judgments, negotiations, and client interactions—allowing them to bridge linguistic competence and professional relevance.

Research also indicates that using case studies improves motivation and retention. As students engage in analyzing real-life legal disputes or decisions, they acquire terminology naturally and develop a deeper understanding of its use in authentic communication. Thus, the case study method represents a synthesis of content-based instruction, task-based learning, and communicative pedagogy.

Methodology. This study adopts a descriptive and analytical approach rather than empirical experimentation. It reviews theoretical frameworks, pedagogical models, and classroom applications of the case study method in Legal English instruction. The analysis focuses on three aspects:

1. Pedagogical Design – examining how case studies are integrated into ESP (Law) curricula and adapted for varying proficiency levels.
2. Language Development – analyzing how engagement with legal cases supports vocabulary acquisition, reading comprehension, and argumentation skills.
3. Instructional Strategies – identifying best practices for teachers, such as guided discussion, role-play, and collaborative analysis of legal scenarios.

Data for this analysis were drawn from academic publications, teacher reports, and sample Legal English course outlines that incorporate case-based methods.

Results. The analysis revealed several pedagogical advantages of using case studies in Legal English instruction:

- Authentic Context: Learners encounter real-world legal reasoning, enhancing their understanding of legal discourse and terminology.
- Critical Thinking: Students practice analyzing legal problems, constructing arguments, and evaluating multiple perspectives.
- Interactive Learning: Group discussions and role-plays promote communication, negotiation, and persuasive speaking skills.
- Vocabulary in Context: Legal terms are learned within meaningful contexts rather than in isolation, improving recall and accuracy.
- Professional Relevance: Case studies simulate real-life legal practice, bridging academic study and workplace expectations.

However, the method also presents certain challenges:

- The complexity of authentic legal texts may overwhelm lower-level learners.
- Teachers must invest significant time in selecting and adapting appropriate cases.

• Without structured guidance, discussions may focus more on legal content than on language development.

Despite these limitations, the overall results indicate that the case study method enhances both linguistic and analytical skills, particularly when supported by targeted vocabulary instruction and teacher facilitation.

Discussion. The findings affirm that case-based learning aligns effectively with the goals of Legal English instruction. By engaging with legal dilemmas and authentic discourse, students not only acquire specialized vocabulary but also develop the communicative strategies necessary for professional contexts. Moreover, case studies bridge the gap between theoretical learning and practical application, a key objective in ESP pedagogy.

To maximize effectiveness, educators should integrate pre-teaching of key legal terms, scaffold case analysis through guided questions, and balance content and language objectives. Collaborative tasks—such as mock trials, negotiations, or client consultations—can extend case-based discussions into communicative practice.

While the method may require adaptation for learners with limited legal background, it provides an invaluable framework for contextualizing Legal English instruction and fostering learner autonomy.

Conclusion. The case study method represents a dynamic and contextually rich approach to teaching Legal English. Its integration into ESP curricula not only promotes active engagement and critical analysis but also supports the acquisition of professional discourse competence. Although challenges remain in selecting suitable cases and balancing linguistic focus, the pedagogical benefits outweigh the constraints. Future research should explore the longitudinal effects of case-based instruction on learners' language performance and professional readiness. For educators, incorporating case studies offers an authentic pathway to connect language learning with the realities of legal communication.
